

Peakview Quick Guide

Vertically placed for mountains

Horizontally placed for a map (setting is necessary)

Before using this application, please confirm the following steps.

(1) Please confirm the horizontal line of the screen. Is it horizontal?

If the horizontal line does not remain horizontal, you need to make adjustments. This step must be completed before adjusting the Viewing Angle, otherwise the viewing angle will be inaccurate.

■ 「Setting 」 →→ 「Sensor angle correction」

(2) Before using, make the following settings.

(A) Set the correct viewing angle for your screen. [The most important setting]

■ 「Setting 」 →→ 「Visible angle setting」

(B) Enable the E-Map. (There is no guarantee that your mobile device can be able to use this feature.)

■ 「Setting 」 →→ 「Map setting」

(3) When using, if necessary, make the following settings.

(A) Modify the distance range which you want to see.

■ 「Setting 」 →→ 「Distance setting」

(B) Modify the number of points which you want to see on the screen.

■ 「Setting 」 →→ 「Point setting」 →→ 「Number of display」

(C) Display peaks which may be hidden.

■ 「Setting 」 →→ 「Show/hide setting」 →→ 「Hiding invisible points?」

(D) Set the display priority.

■ 「Setting 」 →→ 「Show/hide setting」 →→ 「Display priority」
